EDUCATION

- **McMaster University** Hamilton, Ontario
B.Eng, Software Engineering and Co-op *September 2021 – April 2026*

EXPERIENCE

- **CIBC Mellon** Toronto, ON
Solution Designer - System Design, SSMS, Power Platform, Salesforce Admin *May 2026 - Present*
 - Leading the refactoring of the enterprise technology inventory and categorization of assets to **improve traceability and governance in line with OSFI B-13 guidelines.**
 - Designed a solution for a legacy Microsoft Access database migration to **SSMS**, improving data scalability, introducing **automating manual record archival**, and improving data processing via clustered indexing.
 - Collaborating with technology streams on **defining enterprise governance for Microsoft Power Platform.**
- **Intact Financial Corporation** Toronto, ON
Software Developer – Java, Spring Boot, MongoDB, Docker, Jenkins, JUnit, SoapUI *January 2025 - August 2025*
 - Created a generic REST API as an **injectable Maven dependency**, integrated within multiple internal services and **saving developers an average of 10 hours/week** of manual work.
 - Resolved production bugs, security vulnerability patches, and base-image upgrades in team-owned services, **mitigating 150+ critical/high CVEs** using the help of Black Duck SCA to identify vulnerabilities.
 - Applied a test driven development methodology in an Agile environment through the creation and execution of unit tests, regression tests, and integration tests where required in development.
- **LTIMindtree Canada** Mississauga, ON
Software Engineering Intern – Java, Spring Boot, Postman, AWS, JUnit, MySQL *May 2024 - December 2024*
 - Developed a REST API component with a POST endpoint invoking an AWS Lambda function, performing **data masking** for subscribed clients in test environments.
 - Enhanced API authentication scalability and **cut down server response times by upwards of 50% by implementing JWT authentication**, decoupling 8 APIs from a shared MySQL session database.
- **314Labs** Toronto, ON
Full-Stack Developer – Svelte, TypeScript, JavaScript, EdgeDB, OAuth 2.0 *June 2023 - May 2024*
 - Owned and built the UI and business logic supporting the Campaign Creation domain of HypeFundr and streamlined the account sign-up process by implementing SSO via Twitch's OAuth 2.0 API.

PROJECTS

- **Personal Budget Data Pipeline**
GitHub – PostgreSQL, Neon, Python, dbt, Docker, GitHub Actions, Streamlit *August 2026 - Present*
 - Designed a normalized PostgreSQL schema with an ingestion CLI with safe re-runs via dedup keys, **automated with dbt tests and GitHub Actions CI/CD.** Data is connected from Neon Lakebase Postgres with 24 hour data-refresh, and visualized by an always-on dashboard hosted for free on Streamlit Community.
- **Data Analysis Platform for OCD Research**
GitHub – PyTorch, PostgreSQL, Docker, Python, React, FastAPI *September 2025 - April 2026*
 - Designed and implemented the normalized PostgreSQL schemas and REST APIs supporting reliable CRUD operations to handle **roughly 20,000 behavioral trials and counting, all stored in 10+ file formats.**
 - Built an **automated staging and deployment** pipeline using Docker and GitHub Actions, including code analysis checks on each push.

SKILLS

- **Languages:** Java, Python, SQL, JavaScript, C, Bash Scripting
- **Frameworks & Testing:** Spring Boot, React, TypeScript, FastAPI, JUnit, Pytest, Postman, SoapUI
- **Systems & Infrastructure:** Git, PostgreSQL, Docker, Jenkins, GitHub Actions, dbt, Microsoft Azure, Apache Maven, MongoDB, MySQL
- **Enterprise & Security:** JWT, SSO/SAML, OAuth 2.0, PKI/Certificate Management, Salesforce Admin
